

## **Developing a Virtual Language Laboratory**

As part of specialist schools/leading edge Joe Jardine-Viner, Director of ICT at Tonbridge Grammar School, is leading a project to raise standards in speaking and listening in MFL at Key Stage 4. He comes from an MFL background originally but now focuses on ICT.

He has funding to develop a virtual languages lab using materials from the EU COVCELL project and so far the potential has been really exciting. The VLL sits within his school's learning platform (which is Moodle) and can be accessed from home and school. He is also researching issues relating to copyright and audio materials to ensure compliance.

He was wondering whether any other schools within Kent are doing similar sorts of things. He knows of some hardwired solutions, which are often very expensive... his system is essentially free bar some headphones and microphones.

He is also looking for partner schools . They would need to run Moodle as a VLE but he can help with support and training.

If you are interested please contact Joe:
