CFE/CABE  
**GREEN DAY, 2010**  
**Green Day. Fun times. Serious lessons.**

Green Day is an activity packed day about climate change and the built environment. It aims to make schools more sustainable and all of us more environmentally aware through whole school activities and cross-curricular learning.

**Why bother?** Three reasons: firstly, teachers spend all their time trying to improve the future lives of their pupils; unless we act now they will inherit huge environmental and social problems associated with the effects of climate change. Secondly, the built environment is responsible for 50% of CO2 emissions in the UK; making changes in your school will bring this figure down. Thirdly, schools themselves are responsible for 25% of public sector energy costs, so as well as benefiting the planet, action will save your school money.

Green Day is designed to be flexible for schools. The training workshop supports any teacher interested in improving the sustainability of their school and will include:

- examining how the sustainability agenda complements current education and government policy
- considering the journey towards becoming a 'greener' school
- budgeting and how to achieve the greatest energy savings
- engaging pupils through a Green Day curriculum
- planning a successful Green Day event
- obtaining further support and advice.

This will facilitate participating schools to hold their Green Day 2010 between 4th June and 2nd July.

This is a **funded opportunity** for Kent schools.
