

How to start to use 2Create

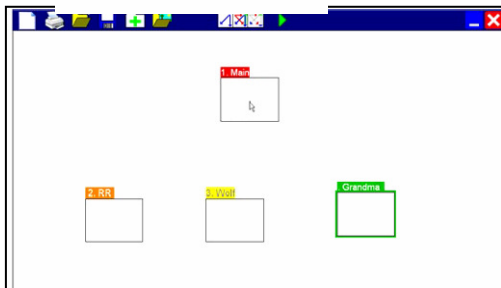

The videos are the place for ideas, or you can use them to get children started on a task. You really don't need a worksheet if you watch these first.

First of all choose the level you want to work at. If you haven't used the software before, the Learning level is the place to start if you want to get the basic idea. Otherwise, choose the standard level for the largest number of tools. (KS2)

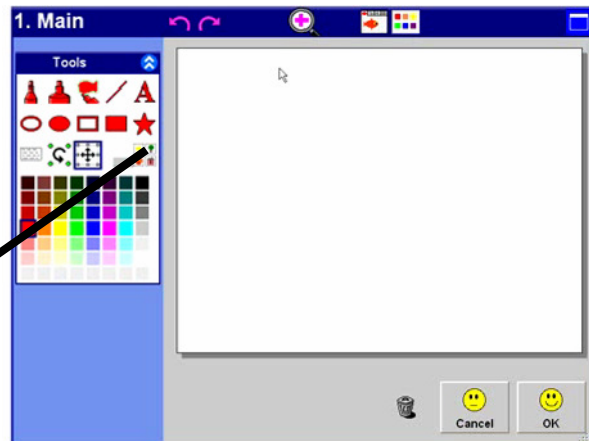

Start by deciding how many pages you will need.

Here I have chosen 4 pages. We will link them later. Click on each coloured tab to give it a name. It will save getting muddled later!!

Then double click on the 'page' to get to the designing stage

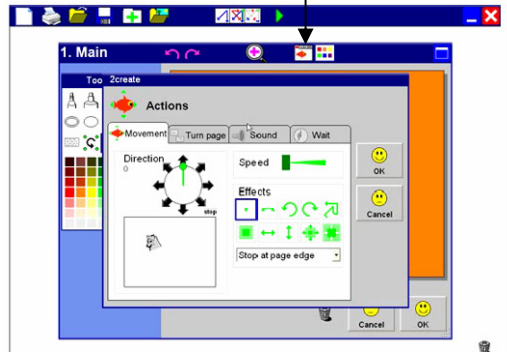

We can start by adding some clipart

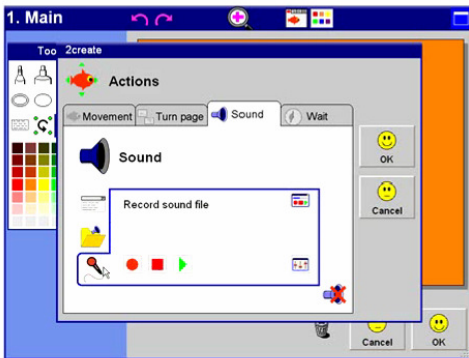

A right click on a picture allows you to change it and layer it.

Click on the fish to get movement and directions for animation

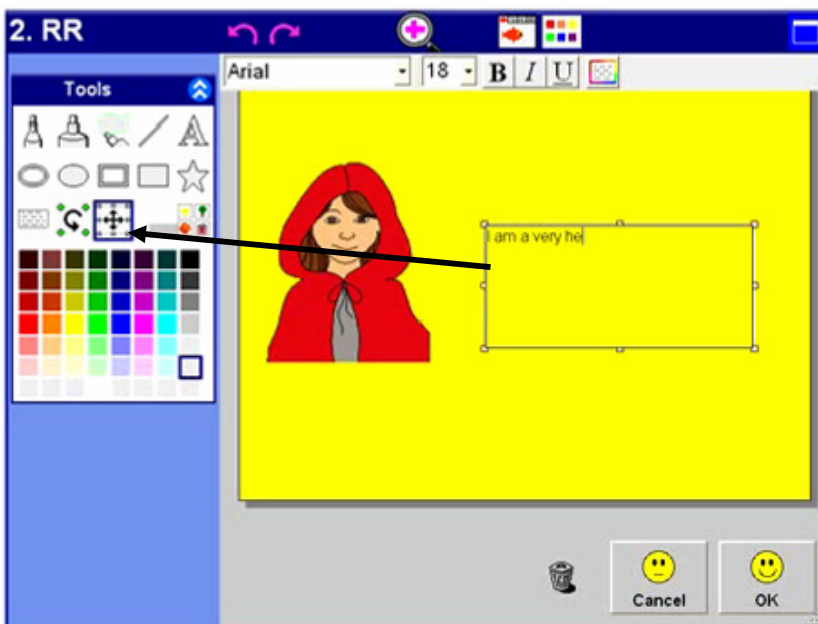

You can also add sound recordings to the page

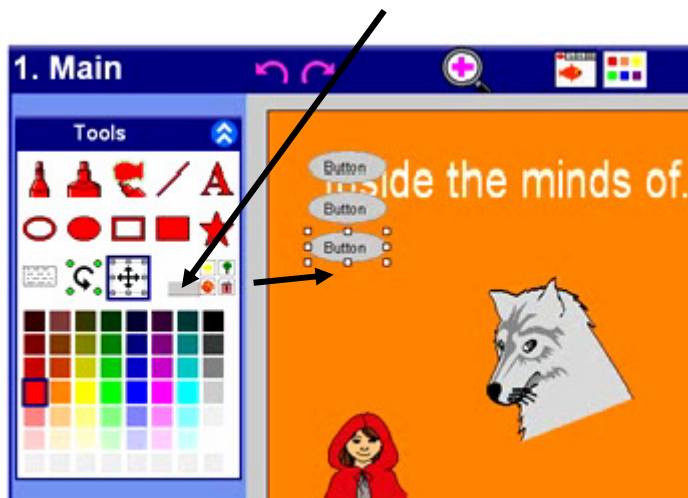

Click on the A to add text for titles, then type on the page

And we can add more text in text boxes.

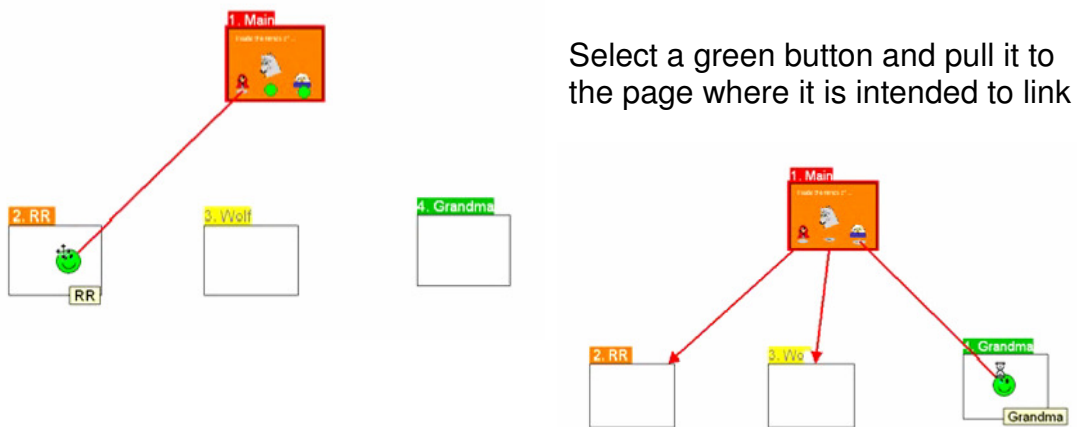

Next we add buttons to link each page

These can be renamed to show where they go.

Then we link the pages in the 'desktop' section.

Select a green button and pull it to the page where it is intended to link

Next, we need to complete all the pages of our story, and then we can make it work as an animated book. To do that, we click on the green arrow.
